# i-net Clear Reports

i-net Clear Reports .NET

With i-net Clear Reports .NET you are no longer bound to the Java platform but can take advantage of i-net Clear Reports simple and powerful reporting right within your own .NET application.

Ad Hoc Reporting

Ad Hoc Reporting is a powerful feature of i-net Clear Reports which allows even unexperienced users to quickly create meaningful reports. It is available as browser based HTML or applet version and can be embedded in other applications as well.

i-net Designer - Formula Editor

With the "Formula Editor" it is possible to create and/or edit multiple formulas within the Formula Editor without having to close and reopen it.

Charts

Using charts it is possible to display many different types of graphs. Depending on the position in the report, the chart can either base upon all data or upon the data of only one group.
